Ultra Foil Series

The Ultra Foil Design was originally developed for vessels with tunnels, has proven to perform well on most hull configurations. The excellent performance at cruise speed is due to the pitch configuration on trailing edges. The foil design is particularly recommended for vessels from 48' thru 85' and also super yachts from 85' thru 120' with high horse power ratings.

Range of production

Diameter 28" to 44"

Construction Material

Nibral.
